

JOYMIE LACABA

Technical Product Owner · Project Coordinator & QA

Angeles, Pampanga, Philippines | GMT+8 | Open to Hybrid / Remote

joylacaba52@gmail.com | LinkedIn | GitHub | slashcal.com

PROFESSIONAL SUMMARY

Product-minded Project Coordinator and QA lead who turns customer and stakeholder needs into prioritized, well-specified delivery. For two years I have been the coordination hub for a remote software team: running Agile ceremonies, owning the backlog and bug lifecycle, writing acceptance criteria, and keeping engineering, design, and business stakeholders aligned on scope, risk, and release readiness. On the side I build and own SaaS products end to end (SlashCal, NativeEyeQA), which means I have personally done every product-owner job: requirements, roadmap, prioritization, and release. I care about shipping quality on time and keeping the user at the center, and my technical background lets me speak the engineers' language without losing the business view.

PROFESSIONAL EXPERIENCE

Project Coordinator & Quality Assurance (Contractor)

Aug 2024 – Present

Eyeball Games Private Limited · Singapore (Remote)

Title progression per signed contract addendums: QA Associate + Community Support (Aug 2024 – Jan 2025) → Project Coordinator & Quality Assurance (Feb 2025 – Present)

- Act as the key link between engineering, design, and business stakeholders for a 5-person team across a live title (Pool Masters on Google Play) and an unreleased project, keeping everyone aligned on scope, priorities, and risk.
- Own and prioritize the backlog: run daily standups and sprint / task prioritization, translating stakeholder needs into clear, actionable work items.
- Defined the product requirements for a new in-game control scheme, specifying intended feel, function, and edge-case behavior (the acceptance criteria), reviewed and approved by stakeholders before build.
- Own the full bug lifecycle in Notion from discovery through fix verification; drive release readiness and sign-off as sole QA on Pool Masters, coordinating playtests with players and developers.
- Maintain product documentation: meeting minutes, action items, risk registers, and status tracking that keep releases on schedule.

QA Intern

Sep 2022 – Nov 2022

Twist Resources · 3-month internship · Remote

- Manual functional and regression testing on web and mobile within Agile release cycles; wrote and updated test cases and logged bugs in JIRA and TestRail with reproduction steps and severity.
- Collaborated with the lead QA on bug triage and release sign-off; picked up basic Selenium and Postman automation.

IT Assistant

Dec 2023 – May 2024

East West BPO · Angeles, PH · On-site

- Provided IT helpdesk support across a high-volume, US-hours operation: account setup, access management, troubleshooting, ticket resolution, and onboarding / offboarding across multiple teams.

Customer Service Associate

Sep 2021 – Mar 2022

Concentrix · Angeles, PH · On-site · Account: Ring (Amazon)

- Supported US customers for Ring smart-home products across phone, chat, and email; triaged issues, escalated complex cases, and met SLA targets. Built the user-empathy and stakeholder-communication habits I now bring to product work.

Career Break: Operations & Self-Directed Learning

Dec 2022 – Nov 2023

Helped run a small wellness business (bookings, staff supervision, payments, inventory) while investing in self-directed learning before returning to tech.

PRODUCT PROJECTS

SlashCal — AI Scheduling SaaS (Founder / Product Owner)

2025 – Present · slashcal.com

A live AI scheduling product I built and own solo, acting as product owner end to end. Defined the problem and ICP, wrote the requirements and operating rules, prioritized the roadmap, and shipped releases. Made user-centered product calls (conversational scheduling, reliability and trust before features, no guest sign-up wall) and set success metrics (activation measured as bookings given a completed setup, not vanity counts). Stack: React, Node.js, PostgreSQL, deployed on Railway.

NativeEyeQA — AI Mobile Test-Automation Tool

2026 – Present · C# / .NET 8, Appium

A QA tool that lets engineers write mobile tests in plain English. I wrote the PRD, defined scope and positioning (a copilot for QA engineers, not an autonomous replacement), and prioritized a phased build. Draws directly on my own QA experience to keep the product grounded in the real tester workflow.

CORE COMPETENCIES

Product & Delivery:	Backlog management & prioritization · User stories & acceptance criteria · Requirements gathering · Roadmap · Sprint planning, reviews & retrospectives · Release planning & readiness · Risk tracking · Stakeholder management
Agile & Tools:	Scrum · Kanban · Jira · Trello · Notion · Daily standups · Milestone tracking
Quality Assurance:	Manual testing (web & mobile) · Test case design · Functional & regression · Bug triage · Fix verification · Release sign-off
UX & Product Sense:	User-centered decision-making · UX / UI collaboration · Data-driven prioritization · SaaS product design
Technical:	JavaScript · SQL · React · Node.js · C# / .NET 8 · REST APIs · Git · comfortable reading code and talking specs with engineers
Domain:	SaaS products · AI / LLM product features · Mobile & web
Languages:	English (professional) · Filipino (native)

EDUCATION

Bachelor of Science in Information Technology

Graduated June 2021

STI College
