

JOYMIE LACABA

AI Automation Engineer · Operations & Workflow Systems

Angeles, Pampanga, Philippines | GMT+8 | Remote, overlaps US hours (PST/EST)

joylacaba52@gmail.com | [LinkedIn](#) | [GitHub](#) | slashcal.com

PROFESSIONAL SUMMARY

AI automation engineer and operator who builds workflow systems people actually adopt. I have spent two-plus years inside the operational roles this work serves: coordinating schedules, standups, follow-ups, inbox and ticket triage, and stakeholder alignment for a remote Singapore game studio and US-hours support floors. In parallel I design and ship event-driven AI automations solo with Claude Code, and extend the tool itself with custom skills and my own MCP server. My systems include an autonomous email-scheduling assistant and the automation engine behind it: scheduled jobs, LLM reply classification, follow-up sequencing, and guardrail-based monitoring over Gmail (SMTP/IMAP) and Slack. I understand the work by hand before I automate it, which is why the systems I build get used instead of ignored.

AI AUTOMATION & WORKFLOW SYSTEMS

Claude ecosystem:	Claude Code CLI (daily driver, ships production apps) · Authored custom Claude Code skills · Built an MCP server (scheduling tools) and integrated hosted MCP services (Gmail, Google Calendar, Drive) · Claude API (Haiku / Sonnet) · AI-assisted development end to end
Workflow & orchestration:	Event-driven architecture · Webhooks · Scheduled / cron jobs · State machines · Job schedulers with retry, watchdog & kill-switch · Auditing workflows for inefficiencies
Automation platforms:	n8n (built a Gmail → LLM intent-classification → Switch → Slack / Notion workflow; comfortable with triggers, nodes, branching, LLM-in-the-loop) · hand-built the equivalent from scratch in Node.js (schedulers, webhook consumers, event pipelines) · Zapier, Make
AI in workflows:	LLM intent / reply classification · Prompt engineering · Claude, Gemini & OpenAI integration with provider fallback · Vision-based self-healing · Structured JSON extraction
APIs & integrations:	REST · OAuth · Rate limits & pagination · Gmail (SMTP / IMAP / API) · Google Calendar · Slack · Notion · Stripe · Mailgun
Reliability & scale:	Monitoring & Slack alerting · Guardrails (send caps, warm-up ramps, auto-pause) · Debugging automated pipelines · Concurrency-safe workers across instances
Data & storage:	PostgreSQL · SQLite · Notion as operational datastore · comfortable adopting Supabase / Airtable
Languages & stack:	JavaScript / Node.js (Express) · Python (AI-assisted) · SQL · React · C# / .NET 8

AUTOMATION & PRODUCT PROJECTS

SlashCal — AI Scheduling & Coordination Automation

2025 – Present · slashcal.com

Two production automation systems I built and operate solo with Claude Code. Both take real operational work (scheduling coordination, inbox handling, follow-ups) and run it end to end.

- **Email scheduling assistant:** inbound guest emails hit a Mailgun webhook, an LLM parses intent, the system generates open calendar slots and auto-replies with times, then runs a thread state machine (observe → propose → nudge → book) with 24-hour follow-up nudges, no-show detection, and confidence-gated auto-booking. Automates the exact back-and-forth an EA does by hand.
- **Automation engine behind it:** a database-backed job scheduler (11 job types on independent cadences, 60-second poll loop, stuck-task watchdog) running multi-step email and follow-up sequences, IMAP reply detection

with 14-way LLM intent classification, and a nightly learning loop. Event-driven, with OAuth, per-timezone send windows, rate-limit guardrails, and Slack alerts scoped to high-signal events only.

- **Stack:** Node.js, PostgreSQL, Claude (Haiku / Sonnet) with Gemini fallback, Gmail SMTP/IMAP, Google Calendar, Slack webhooks, Mailgun, Stripe, deployed on Railway.

NativeEyeQA — AI Mobile Test Automation

2026 – Present · C# / .NET 8, Appium, Claude / OpenAI

Desktop tool that lets QA engineers write mobile tests in plain English. An LLM parses natural-language descriptions into Appium actions at runtime; when a UI element cannot be found, vision-based self-healing re-identifies it from a screenshot so tests survive UI refactors that break traditional scripts. Multi-device across Android and iOS, PRD ingestion to auto-generate test cases, and structured bug reports to SQLite.

PROFESSIONAL EXPERIENCE

Project Coordinator & Quality Assurance (Contractor)

Aug 2024 – Present

Eyeball Games Private Limited · Singapore (Remote)

Title progression per signed contract addendums: QA Associate + Community Support (Aug 2024 – Jan 2025) → Project Coordinator & Quality Assurance (Feb 2025 – Present)

- Run coordination for a 5-person remote team across a live title (Pool Masters on Google Play) and an unreleased project: scope, schedules, milestones, daily standups, and stakeholder alignment on status, risk, and next actions. This is the operational core the target role starts from.
- Own inbound coordination end to end: triage player bug reports, verify reproduction, route to the right engineer, and track through fix verification in Notion.
- Document recurring workflows, meeting minutes, action items, and risk registers, then use Claude Code and AI tooling to speed up test-case drafting, bug writeups, and documentation.
- Lead QA on a new in-game control scheme; defined intended feel, function, and edge-case behavior, approved by stakeholders.

IT Assistant

Dec 2023 – May 2024

East West BPO · Angeles, PH · On-site

- Provided IT helpdesk support to BPO staff: account setup, access management, troubleshooting, and ticket resolution across a high-volume, US-hours operation.
- Supported onboarding and offboarding of agents across multiple account teams; maintained internal IT documentation.

Customer Service Associate

Sep 2021 – Mar 2022

Concentrix · Angeles, PH · On-site · Account: Ring (Amazon)

- Supported US customers across phone, chat, and email for Ring smart-home products; triaged device and account issues and escalated complex cases to the right specialists.
- Met SLA targets in a high-volume, US-business-hours environment; built the inbox-triage and escalation habits I now automate.

QA Intern

Sep 2022 – Nov 2022

Twist Resources · 3-month internship · Remote

- Manual functional and regression testing on web and mobile; wrote test cases, logged bugs in JIRA and TestRail, and picked up basic Selenium and Postman automation.

Career Break: Operations & Self-Directed Learning

Dec 2022 – Nov 2023

Helped run a small wellness business (bookings, staff supervision, payments, inventory) while investing in self-directed learning before returning to tech.

ADDITIONAL SKILLS

Operations & coordination:	Inbox & ticket triage · Scheduling & follow-ups · Cross-functional coordination · Daily standups · Stakeholder alignment · Meeting minutes & action items · Risk registers · SLA-driven workflows
Quality assurance:	Manual testing (web & mobile) · Test case design · Functional & regression · Bug triage · Fix verification · Release sign-off · AI-assisted test automation
Tools:	Claude Code · Cursor · Notion · Slack · GitHub · Railway · JIRA · TestRail · Postman
Spoken languages:	English (professional) · Filipino (native)

EDUCATION

Bachelor of Science in Information Technology <i>STI College</i>	<i>Graduated June 2021</i>
